PROFESSIONAL SUMMARY

Final-year Computer Science student with hands-on full-stack development experience across Next.js, React.js, Node.js, Express, and MongoDB. Built and delivered production systems including a university enrollment platform serving 20,000+ users. Proficient in REST API design, Playwright-based automation, and end-to-end feature ownership. Seeking a MERN stack or full-stack internship to drive real product impact.

EXPERIENCE

DevelopersHub Corporation <i>Full Stack Intern (Remote)</i>	<i>Remote</i> 2025 - Present
- Engineered full-stack features with Next.js frontend and Node.js/Express backend in an agile remote team. - Designed and consumed REST APIs across multiple client projects, ensuring clean separation of concerns. - Reduced feature delivery time by building shared component libraries reused across frontend modules. - Maintained sprint velocity in async, cross-timezone collaboration using structured agile workflows.	
Code Alpha <i>Frontend Intern (Remote)</i>	<i>Remote</i> 2024 (1 Month)
- Built pixel-accurate, responsive UI components in React.js from Figma design specs. - Improved UX consistency across breakpoints by implementing mobile-first styling patterns.	

PROJECTS

E-Enrollment System (University Scale)	repo-link/e-enrollment
- Architected a full-stack digital enrollment platform for 20,000+ users using MERN stack, eliminating paper-based workflows. - Implemented 5 role-based access levels (Admin, Student, Tutor, Manager, Fee Office) with 4 dedicated dashboards. - Automated end-to-end pipeline: application → fee verification → tutor approval → final confirmation with PDF generation.	
UAF Result Harvest (Playwright Scraper)	live-link/uafcgpaharvester
- Built a Playwright-powered web scraping tool to auto-extract LMS grade data, removing all manual entry. - Handled complex edge cases: flexible credit weights (1-5), P-grades, and semester-wise performance aggregation. - Delivered graphical GPA trend insights; adopted by university students each result cycle.	
AgriSense (AI + IoT Platform)	repo-link/agrisense
- Developed an IoT data pipeline to collect real-time soil metrics and trigger AI-driven crop disease detection. - Integrated ML model for fertilizer recommendation based on soil composition analysis output. - Shipped a community platform for peer knowledge-sharing, extending system value across user groups.	

EDUCATION

University of Agriculture Faisalabad	<i>Faisalabad, Pakistan</i>
<i>BS Computer Science</i>	2022 - 2026 (Expected)

CERTIFICATIONS

[Coursera](#) – Node.js & MongoDB: Developing Back-end Database Applications 2025

TECHNICAL SKILLS

Frontend: React.js, Next.js, HTML5, CSS3, JavaScript (ES6+)

Backend: Node.js, Express.js, REST API Design

Database: MongoDB, SQL

Tools & Tech: Git, Playwright, Web Scraping, PDF Generation, API Integration

Languages: C++, Python
